## **SoMExNet**

### **Network enhancing the SoMEx app**

"SoMExNet - Network enhancing the SoMEx app" is a project proposing to implement an extensive process supporting an existent tool: the SoMEx APP. The SoMEx APP was developed during a previous Erasmus+ project (2014-1-BE01-KA202-000875) → [www.somexproject.eu](http://www.somexproject.eu) . This Android application provides people taking part in mobility exchanges with all necessary information (general info, travel, schedules, culture, language, contacts, evaluation, certification, etc.) to ease their life abroad. The app helped the SoMEx partners (VET centers and a national association) to increase the number of mobility exchanges in the building sector.

The specific objective of SoMExNet is to enlarge the number of institutions using the APP and, by that means, the number of mobility exchanges in Europe. By sensitizing trainees to the mobility process, we aim at reaching the global objective of increasing the mobility of young workers in the building sector on the European labor market.

The core partners will develop an extensive process and toolkit in order to make the APP available to any institution in the building sector interested in it. To achieve this, we will:

- transfer the Android APP (new technical partner)
- make the APP available on IOS too
- insure the largest dissemination possible for the APP through a users' network linked by a users' adhesion charter
- develop tools (collaborative platform, users' kit, pedagogical kit and pedagogical process) that will accompany the APP and help the associated partners to use it for their mobility projects in an autonomous way
- further improve the quality of the APP through "on-the-field tests", feedback and modifications

At least 12 institutions (VET centers, schools, intermediary agencies, trade unions, etc.), members of the users' network, 7 core partners and 150 beneficiaries from KA1 will use the APP throughout the project.

The users' extensive toolkit and all other intellectual outputs will be available in all partners' languages as it has to be used by associated partners in the 6 countries of the partnership. Moreover, our aim, at the end of the project, is to be able to propose the APP and its process as a reference tool for European mobilities in the building sector.
