

TechnoVET

Technological resources to improve the digitalization of VET¹

ERASMUS+ project number: 2022-1-ES01-KA220-VET-000086946

SUMMARY

What do you want to achieve by implementing the project?

This project aims to advance digitalization in the field of vocational training. The project is specifically about responding to the changes brought about by the pandemic in the three following areas: technology, soft skills and administrative organization with concrete solutions. Digital competences are some of the key factors, which are particularly important for a successful integration into the labour market. Thus, we intend to support citizens in their personal and professional development.

What activities are you going to implement?

A total of four work packages were created, three of which include specific activities. Among them: Activities for surveys among VET actors, analysis of results and processing of data, writing of reports as a guideline and assistance in the technical and administrative field, development of training in the field of soft skills as well as activities for the development of an open source tool.

What project results and other outcomes do you expect your project to have?

1. Report on which technology has been the most useful in the past years
2. Report as a resource and guide for using technology tools to better digitize learning content
3. Designed preparatory courses for VET actors to prepare and train them for digitalization in the VET field regarding soft skills
4. Developed solutions and green practices for the administrative field

¹ VET: vocational education and training

Project partners:

- International Formation Centre – Madrid / Spain (promoter)
- Bildungszentren des Baugewerbes e.V. – Krefeld / Germany
